Joe,
Is David Shook still the SEAOt contact? I wanted to ask SEAOt to forward this opportunity on to the graduate students. Do you happen to have his e-mail?
Thanks,
Mary Beth

Dr. Hueste,

It's your old TA. I'm working in Dallas now with Halff Associates. I'm really enjoying it. It's neat to be able to use the things you were taught in school in real world applications. Anyways, I'm e-mailing you to see if you can pass on some info to students (graduate students mainly) about job opportunities. Halff Associates is primarily a large civil firm in Texas, but we have a good little structural department that I'm a part of. We mostly design bridges and other civil structures like retaining walls, but we also will design buildings as well. I know a lot of students at A&M just have a mindset for building design, but bridge design is something they should consider as well. You still use the same structural analysis and design processes used for building design, and I think it provides you with a good challenging

career as well. So we are looking for 1) an EIT with a master's degree and 2) an experienced PE. Both positions are available in Dallas and Fort Worth , and we are looking to hire in December 2007 (hopefully) or May 2008. If you could pass this on to the grad students, I would appreciate it. If anyone is interested, you can have them send me a resume (jmcculley@half.com) and I will forward that to my manager. Thanks.

Jonathan McCulley
Structural Engineer, E.I.T.
